

Immersive Training

CONTENT

Using MODJAW, we are able to use jaw motion trackers to analyse the compression, distraction and anterior repositioning of the temporomandibular joint. This allows us to answer many questions which have been left unanswered during the last 50 years of scientific endeavour.

Our patients may be adaptive but is this adaptation causing restricted functionality ? Are then merely restoring the patient but not actually rehabilitating them?

Using MODJAW we now have the ability to answer these questions and many more. This is training session will provide an introduction into using MODJAW which can enable you to fully rehabilitate your patients.

DAY FORMAT

Morning: Clinical content led by Pr. Riaz Yar

Afternoon: Lab protocols and workflow presented by Gabriela Radu, MODJAW Lab Expert

SPEAKER

Pr Riaz Yar

DATE & LOCATION

28th February 2026 Manchester

PRICE & INFORMATIONS

£295, to register please email:
